

Md Ashikur Rahman

Assistant Software Engineer

+880) 172 851 7086

ashikur@exabyting.com

github.com/ashik-23402

CAREER OBJECTIVE

Passionate Software Engineer with 2+ years of experience in Java and Spring Boot, experienced in competitive programming and hackathons. Skilled in building scalable, high-performance applications and distributed systems, with hands-on experience in cloud-native technologies and asynchronous processing. I aim to contribute to impactful projects and grow in a collaborative, innovative environment.

TOP SKILLS

Java

Git

AWS

Spring Boot

Hibernate

MySQL

Docker

PROFESSIONAL EXPERIENCE

1. TRAINEE SOFTWARE ENGINEER / EXABYTING

April 2024 - October 2024

Exabyting is a leading software company specializing in HRM, healthcare, fintech, and AI solutions, delivering scalable and tailored business solutions.

E-Commerce ▾ Health Care ▾ AI ▾

Top Responsibilities

1. Participated in software development lifecycle and clean code training.
2. Gained proficiency in key development tools and methodologies.
3. Learned to design, develop, and maintain scalable software solutions.
4. Contributed to live projects to apply learning.

2. ASSOCIATE SOFTWARE ENGINEER / EXABYTING

November 2024 - present

Exabyting is a leading software company specializing in HRM, healthcare, fintech, and AI solutions, delivering scalable and tailored business solutions.

E-Commerce ▾ AI ▾

Top Responsibilities

1. Assist in researching and testing new features and technologies.
2. Design and implement robust, high-performance APIs.
3. Provide emergency tech support to clients.
4. Modify CI/CD pipelines as needed.

PROJECTS:

Empatic

Empatic is a survey-based platform that helps organizations gather insights, send announcements via SMS, and analyze results. It includes an AI chatbot for policy queries, mood assessment, and task creation.

Challenge	Solution
Improve application performance by offloading heavy or time-consuming tasks to asynchronous processing.	Integrated Amazon SQS (Simple Queue Service) to queue tasks.
Enhance the observability of the application to track and resolve issues quickly.	Integrated Spring Boot with AWS CloudWatch to monitor application logs, metrics, and alarms.
The application generated unnecessary queries using Spring Data JPA, leading to performance issues.	Optimized query generation by replacing redundant JPA queries with custom JPQL queries and implementing JPA batch processing for efficient bulk operations, improving performance and reducing database load.
The Docker image for the Spring Boot application was excessively large, leading to inefficiencies in storage and resource usage.	Reduced the Docker image size by using a multi-stage build. The first stage compiled the application, and the second stage utilized a minimal base image excluding build dependencies.

2. ASSISTANT SOFTWARE ENGINEER / EXABYTING

April 2025 - present

Exabyting is a leading software company specializing in HRM, healthcare, fintech, and AI solutions, delivering scalable and tailored business solutions.

FinTech ▾

Top Responsibilities

- 1. Assist in researching and testing new features and technologies.
- 2. Design and implement robust, high-performance APIs.
- 3. Provide emergency tech support to the service operation team.
- 4. Conducted whiteboarding sessions to break down requirements and distribute implementation tasks across team members.
- 5. Collaborated with the DevOps team on infrastructure updates and deployments..

PROJECTS:

24×7 Loan Application And Approval System for bKash

Developed a digital loan processing platform enabling bKash merchants and agents to apply for loans anytime with a multi-level approval workflow involving DSO, distributor, and bank verification. Implemented automated loan tracking, approval management, and loan disbursement processes to improve operational efficiency and reduce processing time.

Challenge	Solution
Loan application processing became slow and tightly coupled due to synchronous request handling.	Implemented asynchronous processing using Amazon SQS and Spring Boot listeners to decouple loan submission from backend processing, improving scalability and response time.
Handling high volumes of merchant and agent loan applications without impacting system stability.	Designed a queue-driven architecture where loan applications are pushed to SQS and processed independently by background consumers for reliable high-throughput processing.
Managing complex multi-level approval workflows involving DSO, distributor, and bank approvals.	Developed dynamic workflow orchestration logic to route loan applications automatically through different approval layers based on business rules and approval status.
Tracking loan processing stages and monitoring asynchronous operations effectively.	Added centralized logging and monitoring for queue consumers and loan processing workflows to improve observability and troubleshooting.
Avoiding race conditions during asynchronous loan approval and disbursement workflows.	Designed a distributed synchronization strategy with Redis locks to serialize processing for each loan application across multiple application instances.
Ensuring reliable delivery of loan applications across multiple approval layers in an asynchronous system.	Developed scheduled retry mechanisms to reprocess failed approval events and maintain workflow consistency.
Handling sudden spikes in concurrent loan requests without performance degradation.	Enabled horizontal pod scaling and load-balanced processing across up to 20 pods to improve throughput and system stability.

EDUCATION

Degree	Result	Major/Group	Institution
BSc Engineering	CGPA 3.8 out of 4.00	Computer Science & Engineering	Uttara University
HSC	GPA 3.75 out of 5.00	Science	Safiuddin Sarker Academy And College
SSC	GPA 5.00 out of 5.00	Science	Harinal High School

PARTICIPATIONS

- Therap Java Fest 2023 and 2022.
- ICPC Dhaka Regional 2023 and 2022.
